

ROCKZ

THE WORLD'S MOST BULLETPROOF CRYPTO CURRENCY

ROCKZ is a new cryptocurrency that brings solidity and trust into the volatile cryptocurrency market for the first time. Unlike other cryptocurrencies ROCKZ is backed in value to one of the world's strongest and most sustainable currencies, the Swiss Franc, in a 100% transparent and legally enforceable way.

THE PROBLEM

Today there is no ideal way for traders and crypto investors to harvest their profit in a secure manner without returning to fiat currency. Investors who momentarily wish to take profit out of the system before entering a new position, incur high fees every time they exit and re-enter.

The alternative is to keep assets on an exchange or wallet, where they face the inherent security and counterparty risks of the exchange, or the market risks of holding main coins such as Bitcoin or Ethereum.

THE SOLUTION

The ROCKZ' operating company enables investors and traders to exchange their main cryptocurrencies against ROCKZ which is backed to one of the world's strongest currencies, the Swiss Franc. Every ROCKZ is backed 1 to 1 in existing Swiss Francs.

For absolute security the ROCKZ operating company holds (under a fiduciary duty) up to 90% of the CHF in physical paper form deposited in high-security bunkers and vaults.

The remaining 10% are held with various Swiss Banks to ensure liquidity of the ROCKZ coin.

Not only does ROCKZ offer a fully transparent asset-backed coin, backed against one of the strongest currency in the world, but coin holders are protected in case of bankruptcy of the ROCKZ operating company. In such event, coin holders' claims against the ROCKZ operating company will be transferred to the vault operators and banks.
