

Explanation of the type descriptions of the bagpipe gouger

Related products : Bagpipe gouger.

This document explains the different type descriptions found on the bagpipe gouger. Unless otherwise specified, dimensions are in millimeters.

Inside bed set

Example: D26/L80/T2,4

- D stands for the cane diameter.
- L stands for the cane length.
- T stands for the thickness in the middle of the gouged cane when the pointer on the bed set is at "0". Due to tolerances in the parts of the gouger, this may vary a little bit

Outside bed set

Example: D-76,2/L80/T1,3

- D stands for the diameter of the gouged cane. The "-" sign means the bed is convex so it is meant to hold gouged cane and to gouge the outside of the cane.
- L stands for the cane length.
- T stands for the thickness in the middle of the gouged cane when the pointer on the bed set is at "0". Due to tolerances in the parts of the gouger, this may vary a little bit

Inside carriage set

Example: D76,2

- D stands for the gouge diameter.

Outside carriage set

Example: D-76,2

- D stands for the gouge diameter. The "-" sign means it is meant to gouge the outside of the cane.

Guillotine and cutting plate

Example: D22/28

- D stands for the cane diameter range that can be cut with the guillotine or cutting plate.

Shear knife

Example: D20

- D stands for the diameter of the point of the shear knife.
