

AI-GEOMETRY DESIGN

Quattro Del Mar revolutionizes Ras Al Khaimah's urban landscape by integrating urban architecture seamlessly into its cascading slabs. The deliberate choice to interconnect four buildings through bridges and podiums, harmonizing with the context, avoids separate structures. Meticulously crafted using AI and dynamic software, the design prioritizes uninterrupted views of the lagoon and community. The bridges, a pivotal design feature, not only enhance the architectural flow but also house residences, elevating the cascades' allure with breathtaking panoramic vistas, defining this waterfront development's iconic status.
