

Installation Instructions

WIDEcapture scanning plugin for Macintosh

Plugin name: Context Wide Format Scanning 2.0

System Requirements:

Macintosh with OS X (10.2 or 10.3) with FireWire or USB connection point.
PhotoShop 7.0.

To install the plugin and scanner drivers:

The disk image 'Context_WFS_and_drivers_2_0.dmg' contains two installation packages – one for the actual plugin program and one for the scanner drivers. You must install both packages to run the plugin.

You must have '**Administrator**' rights for complete installation.
The Macintosh will reboot after installing the scanner drivers.

- 1) Double-click on the disk image 'Context_WFS_and_drivers_2_0.dmg' to open the folder with the two installation packages.
 - 2) Double-click on 'Plugin.pkg'
 - 3) Follow the on-screen instructions for installation of the plugin.
 - 4) Double-click on 'ContextDrivers.pkg'.
 - 5) Follow the on-screen instructions for installation of the drivers.
-

To Start the Plug-in:

- 1) Open the Adobe PhotoShop program.
 - 2) From file menu, select 'Import/Wide Format Scanning 2.0'.
 - 3) The plug-in interface will appear on the screen.
-

If no scanner name appears in the scanner drop box, please check that...

- 1) The scanner is powered on and ready.
 - 2) The scanner is connected to your Macintosh computer.
 - 3) The scanner model name appears in 'Apple System Profiler' under FireWire or USB devices. To do so:
 - a. Start: '/Applications/Utilities/Apple System Profiler.'
 - b. Select: 'Devices and Volumes'
 - c. Expand: 'FireWire Information' or 'USB Information' by clicking on the triangle.
 - d. The scanner model name should be displayed under 'Product Name'.
 - 4) The scanner name can be found on the 'Supported Scanners for WFS 2.0' list.
-

To remove the plugin:

You must remove the following 4 items manually:

- 1) 'ContextOSX' from '/Applications/PhotoShop 7.0/Plug-ins/Adobe PhotoShop Only/'Import/Export' '.
- 2) *'ContextAPI.Bundle' from '/Library/Application Support/Context'.
- 3) 'ContextDrivers.pkg' from '/Library/Receipts'.
- 4) 'ContextSBP2.kext' from '/System/Library/Extensions'.

*To remove the item '**ContextAPI.Bundle**', you must have '**Administrator**' rights and you need to first change the bundle's ownership permissions to your own account.

Details about the Installation on your system:

The disk image 'Context_WFS_and_drivers_2_0.dmg' contains two installation packages.

The package 'Plugin.pkg' contains the Plug-in installation program, which places the plug-in bundle 'ContextOSX' in the PhotoShop folder '/Applications/PhotoShop 7.0/Plug-ins/Adobe PhotoShop Only/'Import/Export' '.

The package 'ContextDrivers.pkg' contains the drivers, enabling the plug-in to communicate with the scanners. The drivers are placed in the folders '/Library/Application Support/Context/ContextAPI.Bundle', '/Library/Receipts/ContextDrivers.pkg' and '/System/Library/Extensions/ContextSBP2.kext'
