

WORKFLOW DISCOVERY

1.0.1

INTRODUCTION

The Workflow Discovery add-on works with Atlassian JIRA application. It allows to easily search conditions, validators, post functions, properties and step properties across all workflows and see their usage in transitions or steps.

The content is displayed on a page which is located in the Workflows Administration and in the issue panel for a user with granted Workflow Discovery permission.

ADMINISTRATION GUIDE

The add-on does not require any configuration. It does not store any data into Jira instance or any external servers.

INSTALLATION

The process of add-on installation is described by Atlassian and can be found at <https://confluence.atlassian.com/upm/installing-add-ons-273875715.html>.

After successful installation a license key is required to insert in appropriate field to enable all functionalities of this add-on.

USER'S GUIDE

ADMINISTRATION TOOL

The administration tool is located in the Workflow section of the Issue Administration.

It allows to search conditions, validators, post functions, properties and step properties by typing a search text in all workflows or in a selected workflow. It gives an ability to filter the results of active or all workflows.
