

# Types of Cheap Email Hosting Servers in India

Emails have a crucial role to play in every online business. If you're the owner of a company, you may be using them every day for conversing with your customers and clients. You have to take the necessary steps to ensure that this conversation remains safe at all times.

## Hosting

If you wish to learn more about cheap email hosting India, this topic is for you. It's a service that hosts an organization's emails on a server. You may have to purchase this server or rent it from the hosting service provider.

## The types

There are four types of servers worth mentioning. You'll find the name and explanation of each below.

1. IMAP: In this particular type of hosting, you have to sync the mail server to the software program present on your machine. In turn, you'll get to see the email as it stays on the server.
2. POP3: In this hosting solution, you have to download your mail from the server and store it on your computer. This feature lets you read your emails offline, but you may not find a few or all of the downloaded mails available on the server.
3. Cloud: If you own a small business that operates within a limited budget, and if you don't have an infrastructure that can facilitate disaster recovery, you can rely on cloud services offered by Google or Microsoft.
4. ISP: Service providers offering access to the internet provide you with mail servers that you can use for conventional personal communications.
