Illuminating The Path Of Progress

Lighting the way of progress Thomas Alva Edison is the most famous inventor in American history. Edison designed, built and provided the electric era. He revolutionized, changed the focus of technology, changed his lifestyle, and created millions of jobs. Although he is not a scientist, he is known for his scientific invention. His true talent is that he can judge the problem clearly and work hard on the experiment. He is a master of trial and error.

But I did not give up all hope. A recent example of the progress of wage stagnation shows the way to progress - the voice of constructive citizens of local organizations promoted the change of cities and nations and formed national policies. What does this mean to you? Please vote if you have not voted yet. Collaborate with your neighbors and colleagues to find a common cause to solve life's challenges and job challenges you want to solve and discuss solutions together instead of finding a villain to kill the devil. And when you plan a local plan, please share what is going well and what goes wrong. We need more to make the United States wonderful again.

Think of your career path as a way. Traditional career paths are very good and clear by common sense. By contrast, the way to your ideal career is unfamiliar and covered with darkness. To find and pursue the ideal career path, we need intention, courage, and much humility (this topic will be discussed in a future article).

Looking back at my career path, even if it seems that it is not a clear career path, that has many implications for me. It makes me feel like any strange tangent I have come across in my career, has purpose, and I like to combine my favorite things, art and technology 2, and do it everyday I made it. At this point, computer science becomes more accessible and easier to accept. Why do I have to do everything when I consolidate all the themes of work and activities? When I was a high school student, I would like to make things with my computer, but every time I create a program, it will work and it will become brilliant.
