Commission for **Bit**bon purchase	0.25% of the payment amount in USD, but not less than 0.1 USD
Commission* for **Bit**bon sale	Commission for the **Bit**bon sale is calculated by the exponential formula: $$K(\%) = e^{\frac{(35 - 0{,}9 \times Px) \times 5{,}1}{35}} + K_0$$ where Px is the sale price; K_0 is the minimum commission Fixed minimum commission of 0.5% is established for the **Bit**bon sale at the price of 55 USD and above
Minimum commission for **Bit**bon sale	0.5% of the sale amount, commission is charged in USD
Leverage*	Not available According to the results of trading operations, fiat money and crypto currencies are exchanged based on the ratio 1:1
Order matching algorithm	FIFO (First In First Out) is an algorithm for matching orders that operates according to the principle "first in, first out". In the process of matching incoming orders, a Limit order placed in the order book first is processed earlier than other orders at the same price level.

Additional information:

* Commission is a service charge for each executed trading operation. The commission, calculated using the formula, is charged by the Bit Trade Exchange and distributed in favor of affiliate programs.

* Leverage is a ratio between the borrowed amount and the volume of a trading operation.

* Limit order is a Buy or Sell order of a trading instrument placed in the order book at the price set by the Customer.

If the Limit order is not executed within 90 days, it is automatically rejected by the system, and the Customer's funds are returned to his/her Trading Account.
