Hurricane Matthew: Digicel Network Functionality
15 October 2016

- Ninety-five percent of the Haitian population normally lives under Digicel radio coverage. Normal geographic coverage can be found at: [http://www.digicelhaiti.com](http://www.digicelhaiti.com)

- The information provided here comes from the Digicel network team. Recovery of the network is far advanced. We endeavour to provide daily updates of the state of the network.

- Note that functioning mobile towers in an area may not always translate into the ability of all users to place calls as communication demands are high and network capacity reduced.

- The data does not differentiate between 2G, 3G or 4G services and therefore primarily serves as a guide to the functionality of voice and SMS services.

Flowminder.org is a non-profit organization registered in Stockholm, Sweden. Digicel is a mobile operator in Haiti
