KUSSBUS

by Utopian Future Technologies

Junior Frontend Developer (m/f)

Utopian Future Technologies develops and operates the on-demand commuter **shuttle service** Kussbus. We break free from one-schedule-fits-all public transportation and offer a solution that adapts to individual demands, by using flexible virtual lines. The comfort of a zero-transfer commute combined with the convenience of in-app hailing, convinces our customers to choose *Kussbus* over their cars.

Do you want to join us in solving the ever increasing **traffic problem** and reduce its negative impact on our wellbeing and environment? Do you know how to create **user interfaces** for complex **web applications**? Are you familiar with modern **javascript** development (ES6/ES2015) and know how to apply it to frameworks such as **react** to build composable and clean UI code? Are you familiar with the intricacies of complex layout using **html** and **css**. Do you take pride in writing **excellent**, **understandable**, testable and reusable code? Do you favor exactly understanding what you and your code does over jumping on the latest hype technology? The you might be the Programmer we are looking for.

You will work in close collaboration with our team of backend engineers, UI designers and product developers to create the most **usable**, **efficient** and **beautiful** interfaces for internal use and for our external partners. Since we work extensively with geographic and time-series data, you should be familiar with creating UI with enriched maps and different types of interactive graphs. Additionally, you will assist in extending our website's CMS and work on our mobile applications. Knowledge in other languages like python, java, sql and with GNU/linux is a definite plus.

Since we operate in a highly competitive market, being reactive to new requirements is of utmost importance. We expect you to be curious about new technologies and state of the art in programming and frontend technology. You should question dubious decisions and be proactive in suggesting changes to the benefit of our customers.

We can offer you a challenging job in a friendly and highly motivated team of around fifteen people. We are conveniently located in the center of Luxembourg City, the cozy, yet cosmopolitan heart of Europe. Btw, by challenging we don't mean chronic overtime and little pay but rather interesting programming problems and the opportunity to actually make a difference.
