

Shop Solution – Implementation Guideline

The booking module is small script that allows bikes to be directly booked online, through external websites.

All listed bikes get shown in a modern, responsive grid inside the existing websites. By clicking on one of the bikes, a simple popup opens which allows the bikes to be booked directly on page.

1. Add the following Script directly before the </head> tag of your website

```
<script type="text/javascript" src="https://s3.eu-central-1.amazonaws.com/listnride-cdn/lnr-shop-integration.min.js"></script>
```

2. Add the grid container wherever you want the bikes to be shown

```
<div id="listnride" data-user="XXXX" data-lang="YY"></div>
```

XXXX = your user ID

You can find your User ID through opening listnride.com, clicking on your profile picture and clicking on „Profile “. It is the last number in the URL, like www.listnride.com/users/XXXX.

YY = the language set

The languages currently supported are **de** (German), **en** (English) and **nl** (Dutch)

Check if you have any bikes listed on listnride.com as these will be displayed directly in the div container.
