

MILK SYSTEM CLEAN KIT

ALKALINE AND ACIDIC MILK SYSTEM CLEANING POWDER

Alkaline milk cleaners are very effective at dissolving most milk stone soiling using a combination of ingredients that break down fats and protein, as well as lifting particulates from the surface. Acidic milk cleaners target the mineral salts more than alkaline cleaners. Minerals, such as calcium and magnesium, in water and milk help bind the soil together and can increase adherence to surfaces.

Acidic products dissolve these mineral salts and free the milk stone soil from the surface. In terms of acidic or alkaline type milk cleaning system, both products should be used as they target two different soil types. Cafetto Milk System Clean Kit is packed with 6 cycles of both alkaline and acidic cleaners. This milk kit provides everyday cleaning for a month with 1 acidic clean and 4 alkaline cleans for optimum cleaning result in milk systems.

ALL OVER CLEAN

Alternating cleans between MFC Powder Red and MFC Powder Blue will provide an all-over clean for all milk components.

MFC POWDER RED

Acidic powder is designed to clean and descale milk lines, frothers and parts of automatic machines.

HOW TO USE

DAY 1 & DAY 2-5 TO CLEAN MILK LINES AND FROTHERS

- Flush milk out of system with 500mL of fresh water.
- Add 1 sachet of Acidic (day 1) or Alkaline (day 2-5) 10g to 500mL (2 cups) warm water (75°C) in a container or jug.
- Stir until powder is completely dissolved.
- Flush the entire solution through the milk system following the machine manufacturer's cleaning instructions.
- Once the solution is dispensed, rinse the container. Fill the container with 1 litre (4 cups) of clean water and flush through the milk system to thoroughly rinse.

Cafetto® is proud to be certified by independent globally-recognised industry bodies
