LECIFEED® CLASSIC

LECITHIN FORMULA

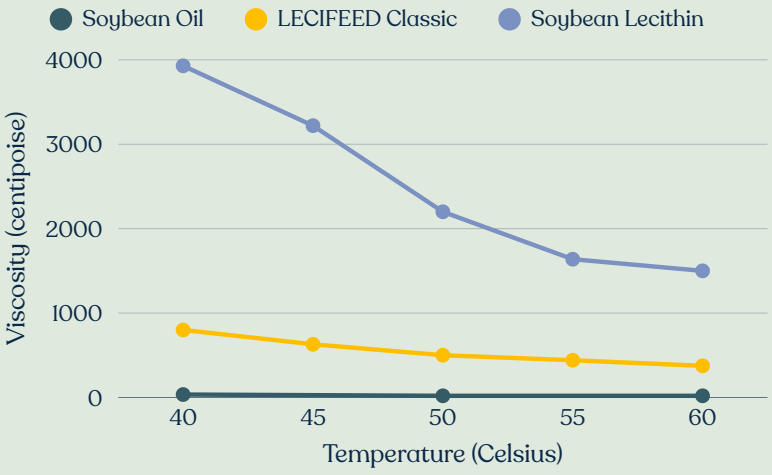

LECIFEED® Classic is a lecithin-based product which helps to emulsify fat sources in the feed. This improves fat digestion of total fat content in the feed. LECIFEED® Classic is suitable for swine, poultry, turkey, aquatic species, and ruminants. LECIFEED® is a liquid product with a low viscosity, significantly improving the handling compared to crude lecithin.

- Reduces feed cost
- Highly digestible energy
- Choline, Inositol, Phosphorous
- Natural source of vitamin E
- Efficient metabolism
- Excellent binding of dust

FUNCTIONALITY OF LECIFEED

LECIFEED® Classic mostly consists of soybean lecithin and is a natural source of important building blocks such as (highly digestible) phosphorous, choline, inositol and vitamin E. Marvesa conducted several trials with various lecithin-based products, with soybean oil or palm oil as control group. These trials have shown that our LECIFEED® blends serve as an excellent source of energy, with additional benefits on total fat digestibility. Furthermore, phospholipids from LECIFEED® act as an emulsifier by aiding in micelle formation. This increases the digestibility of fatty acids in the small intestine, thereby increasing the amount of energy that can be utilised from the fat source. Over 7 different trials, LECIFEED® on average showed a 6,1%-point increase in total fat digestibility than soybean oil. In practice, this means soybean oil can be replaced 1-on-1 with LECIFEED® Classic without compromising animal performance, with additional benefits especially in the starter and grower period when the digestive tract is still in development.
