

Service Description

d.velop enterprise search for Atlassian Confluence

1 Overview

In addition to the "d.velop cloud platform service description", the product-specific functionalities of d.velop enterprise search for Atlassian Confluence are described herein.

The services support, availability and update of d.velop enterprise search for Atlassian Confluence are described in the "Service Level Agreement Cloud & SaaS".

2 Scope of functions

d.velop enterprise search is the central hub for accessing and working with a company's entire body of knowledge. By enabling company-wide searches of all information available in the company, d.velop enterprise search helps companies boost their knowledge productivity and ultimately their competitiveness. All information can be retrieved from a central location and processed further. For example, you can access your e-mails, DMS system, ERP system and CRM system all from a single location so that you can keep track of all information at all times.

d.velop enterprise search for Atlassian Confluence is a provider that enables you to connect Atlassian Confluence, as well as a customizable single-field search function that searches all connected systems in a single operation and returns the results.

Individual user rights from the leading source system are retained and taken into account down to the object level.
