

Product Description

d.velop process studio

1 Summary

Below is a description of the functions and services of d.velop process studio. For d.velop cloud customers, the information in the "Service Description d.velop cloud platform" also applies. The support, availability and updating of d.velop process studio are described in the "Service Level Agreement".

d.velop process studio provides tools for the automation and customization of processes. Depending on the pricing model selected, the tools can be used to design customer-specific processes in a Business Process Model and Notation (BPMN) modeler, arrange components in a form, and connect third-party systems using customer-specific JavaScript programming or via the Microsoft Power Platform connector. Once created, processes can also be monitored and administered with d.velop process studio.

2 Scope of services

The scope of functions in the following functional description is included:

d.velop process studio [Function description](#)

3 Scope of functions

The product functions of the d.velop products contained in d.velop process studio are divided as follows

Explanation of operating modes:

- C1 = Available in the multi-tenant cloud at Amazon Web Services (AWS)
- C2 = Available in the multi-tenant cloud at Open Telekom Cloud (OTC)
- H = Available in the hybrid deployment model (on-premises repository with multi-tenant cloud services according to availability in the model)
- O = Available in the on-premises deployment model (without use of cloud services)

Legende:

- = Function is included in the product
- = Function is not included in the product
- Text = Product is included according to specification
- € = Additional Costs apply

Digital Workflows	Deployment mode	business
Execute digital processes (engine)	C1, C2, H, O	1000 WFLs*
Form designer	C1, C2, H, O	●
Process modeling tool	C1, C2, H, O	●
Business rules (decision tables)	C1, C2, H, O	●
Scripting engine	C1, C2, H, O	●
Process monitoring	C1, C2, H, O	●
Task management	C1, C2, H, O	●
Microsoft Power Platform connector	C1, H	●
Template library	C1, C2, H, O	●
Reporting and analysis options	C1, C2, H, O	●

Managing user rights	C1, C2, H, O	•
Web frontend	C1, C2, H, O	•
Authentication	C1, C2, H, O	•
Import/Export	C1, C2, H, O	•

*) In the d.velop documents platform edition business, 1,000 workflow executions per productive tenant per month are included. This restriction applies exclusively to the use of Process Studio services in multi-tenant cloud operations (deployment models: Cloud (AWS and OTC) and Hybrid). In the d.velop documents platform edition ultimate, unlimited workflow executions are included.
