Product Description
d.velop kickstart4process

1 Overview

In addition to the "Product Description d.velop cloud platform", the product-specific functionalities of d.velop kickstart4process are described herein.

The services support, availability and update of d.velop kickstart4process are described in the "Service Level Agreement".

2 Scope of functions

d.velop kickstart4process is an application that you can use to easily create processes. You can create processes by selecting activities and then customize them using forms and various controls.

d.velop kickstart4process gives you the tools you need to automate your business processes. You can create tasks to enable other users to participate in a process or execute automated service activities. You can also initiate processes based on saved documents.

To make it easier to create a process, the software allows you to reuse values from an activity in a later activity. Using variable values in this way makes your processes more dynamic, for example by giving you the flexibility to specify different assignees for a task.
