Product Description
d.velop archivelink for SAP Solutions

1 Overview

In addition to the "Product Description d.velop cloud platform", the product-specific functionalities of d.velop archivelink for SAP Solutions are described herein.

The services support, availability and update of d.velop archivelink for SAP Solutions are described in the "Service Level Agreement".

2 Scope of functions

d.velop archivelink for SAP Solutions is a web-based application (app) that is operated/hosted via the basic d.velop cloud platform app. d.velop archivelink for SAP Solutions provides services for connecting your SAP systems to d.velop documents via the SAP ArchiveLink interface. The available functions have been tested for proper storage and display of documents as part of the interface certification process required by SAP.

You require a proxy server for the technical connection between your SAP system (tenant) and the respective d.velop cloud tenant. You can download the necessary setup directly in the app configuration, along with the configuration parameters for your d.velop cloud tenant.

We provide you with reports and customizations for your SAP system to ensure that your documents from SAP are assigned the correct categories and properties in d.velop documents. These extensions are developed in the SAP namespace of d.velop AG and are also available for download in the app configuration. In SAP you can define the properties (metadata) with which you want to link your documents in d.velop documents. This is known as indexing the documents and usually takes place automatically in the background while the interface is running. For ArchiveLink documents in d.velop documents, you also have access to the “post-indexing" function. This function lets you resynchronize the properties in d.velop documents with the SAP data at any time.

As part of the solution, we also provide you with reports for your SAP system so that you can use the barcode scenarios available in SAP ArchiveLink for storing incoming documents (“Early/Late Archiving Using Bar Codes”). This allows you to create barcode links in your SAP system and store the associated documents in d.velop documents using the d.velop archivelink for SAP Solutions app.
