Product Description
d.velop connect for Microsoft SharePoint

1 Overview

In addition to the "Product Description d.velop cloud platform service", the product-specific functionalities of d.velop connect for Microsoft SharePoint are described herein.

The services support, availability and update of d.velop connect for Microsoft SharePoint are described in the "Service Level Agreement".

2 Scope of functions

d.velop connect for Microsoft SharePoint is a web-based application (app) that is operated/hosted by the d.velop cloud platform basic app. d.velop connect for Microsoft SharePoint provides services that enable you to interact with SharePoint, for example to store documents, create list entries or search SharePoint. You can program these services yourself, or you can use other apps that integrate with this module, such as d.velop connect for Microsoft Dynamics 365 or d.velop enterprise search, in order to search SharePoint or to store documents from Microsoft Dynamics 365 online in SharePoint. For storing documents, the app provides you with a field mapping tool that you can use to map metadata from the source system to specific fields in SharePoint.
