PC MODULE

The built-in all-rounder

The Predia PC module is a built-in computer in your touchscreen and offers the user great convenience. It is no longer necessary to connect the touchscreen to a separate computer. The Predia PC module turns a Predia Touchscreen into a complete interactive solution.

No cables

The Predia PC module is integrated into the Predia touchscreen, so no cables are needed to connect the display to an external computer.

Excellent specs

The Predia PC module features a powerful Gen 11 Intel processor, only A-brand components, USB-C connection and Ultra HD graphics card.

With convenient HDMI-out

The Predia PC module is equipped with a convenient HDMI output that makes, for example, an HDMI splitter for a monitor on the desk unnecessary.

Predia PC-Module
