

NOVO NORDISK

Table 3. Summary of the Policy Alignment Assessment checklist

Name of Organisation: Novo Nordisk	Tier: 1 (pharmaceutical)
Assessment	
1. Is the organisation directly connected with therapies or products which are claimed to benefit the health of overweight or obese people, and is there reasonable evidence for the claimed benefit or is there evidence of harm?	NN makes products for weight management and metabolic treatment. Claims and evidence of efficacy are subject to FDA, EMA etc controls.
2. Is there reasonable evidence that the company has marketing /advertising strategies or undertakes lobbying or attempts political influence which may be deemed inconsistent or contradictory to World Obesity's advocacy positions or the positions of international bodies with which World Obesity is in official relations (e.g. the World Health Organization)?	No evidence found.
3. Are there any known organizations, bodies or campaigns being funded by the company which might be deemed inconsistent or contradictory to World Obesity's advocacy positions or the positions of international bodies with which World Obesity is in official relations (e.g. the World Health Organization)?	No evidence found.
4. Is there reasonable evidence the company is failing on ethical criteria, e.g. child labour and employee welfare practices; environmental and sustainability practices; human right practices, or that in contrast it has good practices in place?	No evidence found. Statements of principles are given at http://www.novonordisk.com/about-novo-nordisk/default/positions.html
5. Does the company have a close business relationship with other commercial interests (e.g. subsidiary or parent company) that should be taken into account in the assessment of risk?	The commercial business is owned by the non-profit Novo Nordisk Foundation, at arm's length through Novo A/S unlisted public company.
6. Are there other matters which might cause reputational damage or a conflict of interest? Are there any known concerns about the company's probity or reputation?	Pharmaceutical companies may be accused of having a commercial interest in obesity perpetuation. NN donates to charities, including International Diabetes Federation.
