

General Presentation

About us

Domyn is a company specializing in researching and developing Responsible AI for regulated industries, including financial services, government, and advanced manufacturing.

It supports enterprises with proprietary, fully governable solutions, based on a composable AI architecture – including LLMs, AI agents and one of the world's largest supercomputers.

Partnerships and strategic collaborations

Trusted by world leading regulated organizations

Strategic positioning in the AI market

How Domyn stands out in mission-critical use cases among global leaders.

AI for individual productivity

Copilot, Gemini

AI integrated into a **third-party** product

Designed for **user-level** data

Language models controlled by the **provider**

AI **shared** among multiple users

AI for non-critical use cases

ChatGPT, Claude

AI **external** to the company's network

Designed for **non-critical** data and contexts

Language models controlled by the **provider**

AI **shared** among multiple customers

AI for mission-critical use cases

Domyn

Safe AI, **internal** to the company

Designed for **critical** data and contexts

Language models **owned** by the customer

AI **dedicated** to each customer

Your Own Domain of Intelligence

How Domyn transforms enterprises into AI organizations.

Own your AI, from chip to final application

-  **Full LLM ownership** through open enterprise licensing
-  Complete control of the **AI lifecycle**, from agents to code
-  Run **critical AI workloads** on private, dedicated infrastructure

Protect your competitive edge with full autonomy

-  **Safeguard IP** through isolated deployments in private spaces
-  Leverage only **your own LLMs** — no external models involved
-  Run securely in your perimeter, **no external networks** involved

Rely on domain-specific AI, crafted by industry specialists

-  **Start with ready-to-use agents** for domain-specific scenarios
-  Leverage enterprise LLMs fine-tuned on your **proprietary data**
-  AI Solutions driven by teams of domain and **industry experts**

Design your own AI, tailored to your unique challenges

-  Co-design custom AI solutions **built around your needs**
-  Create **your own agents** through a no-code AI platform
-  Enhance AI solutions with **enterprise-grade** software modules

Microsoft Certified Software Designation Financial Services AI

⚡ Official recognition from Microsoft as a trusted AI Cloud Partner

Microsoft endorses our capability to deliver secure, scalable, and high-impact AI solutions for the financial services sector. This prestigious recognition validates our role as a **trusted technology partner for regulated industries**, ensuring that our products meet the highest standards of security, compliance, and performance.

By earning the Microsoft Certified Software Designation – Financial Services AI, we demonstrate not only technical excellence, but also a proven ability to support mission-critical operations in complex and highly regulated environments. This recognition strengthens our credibility in the market, positioning us as a **trusted partner within the Microsoft ecosystem**, and underlines our ongoing commitment to innovation and differentiation in the financial services sector.

Domyn

The Chip-to-Frontend Framework

How Domyn transforms enterprises into AI organizations.

 Domyn | Agents

Superintelligence for enterprises

Choose between ready-to-use agents for mission-critical tasks and fully bespoke ones, built around your unique challenges. Compatible with any LLM or legacy system.

 Domyn | Platform

Design and control your AI ecosystem

One platform to build and orchestrate AI Agents through a no-code interface or SDK — deployable within private environments, entirely free from external dependencies.

 Domyn | Models

Owned by you. Fine-tuned to your world

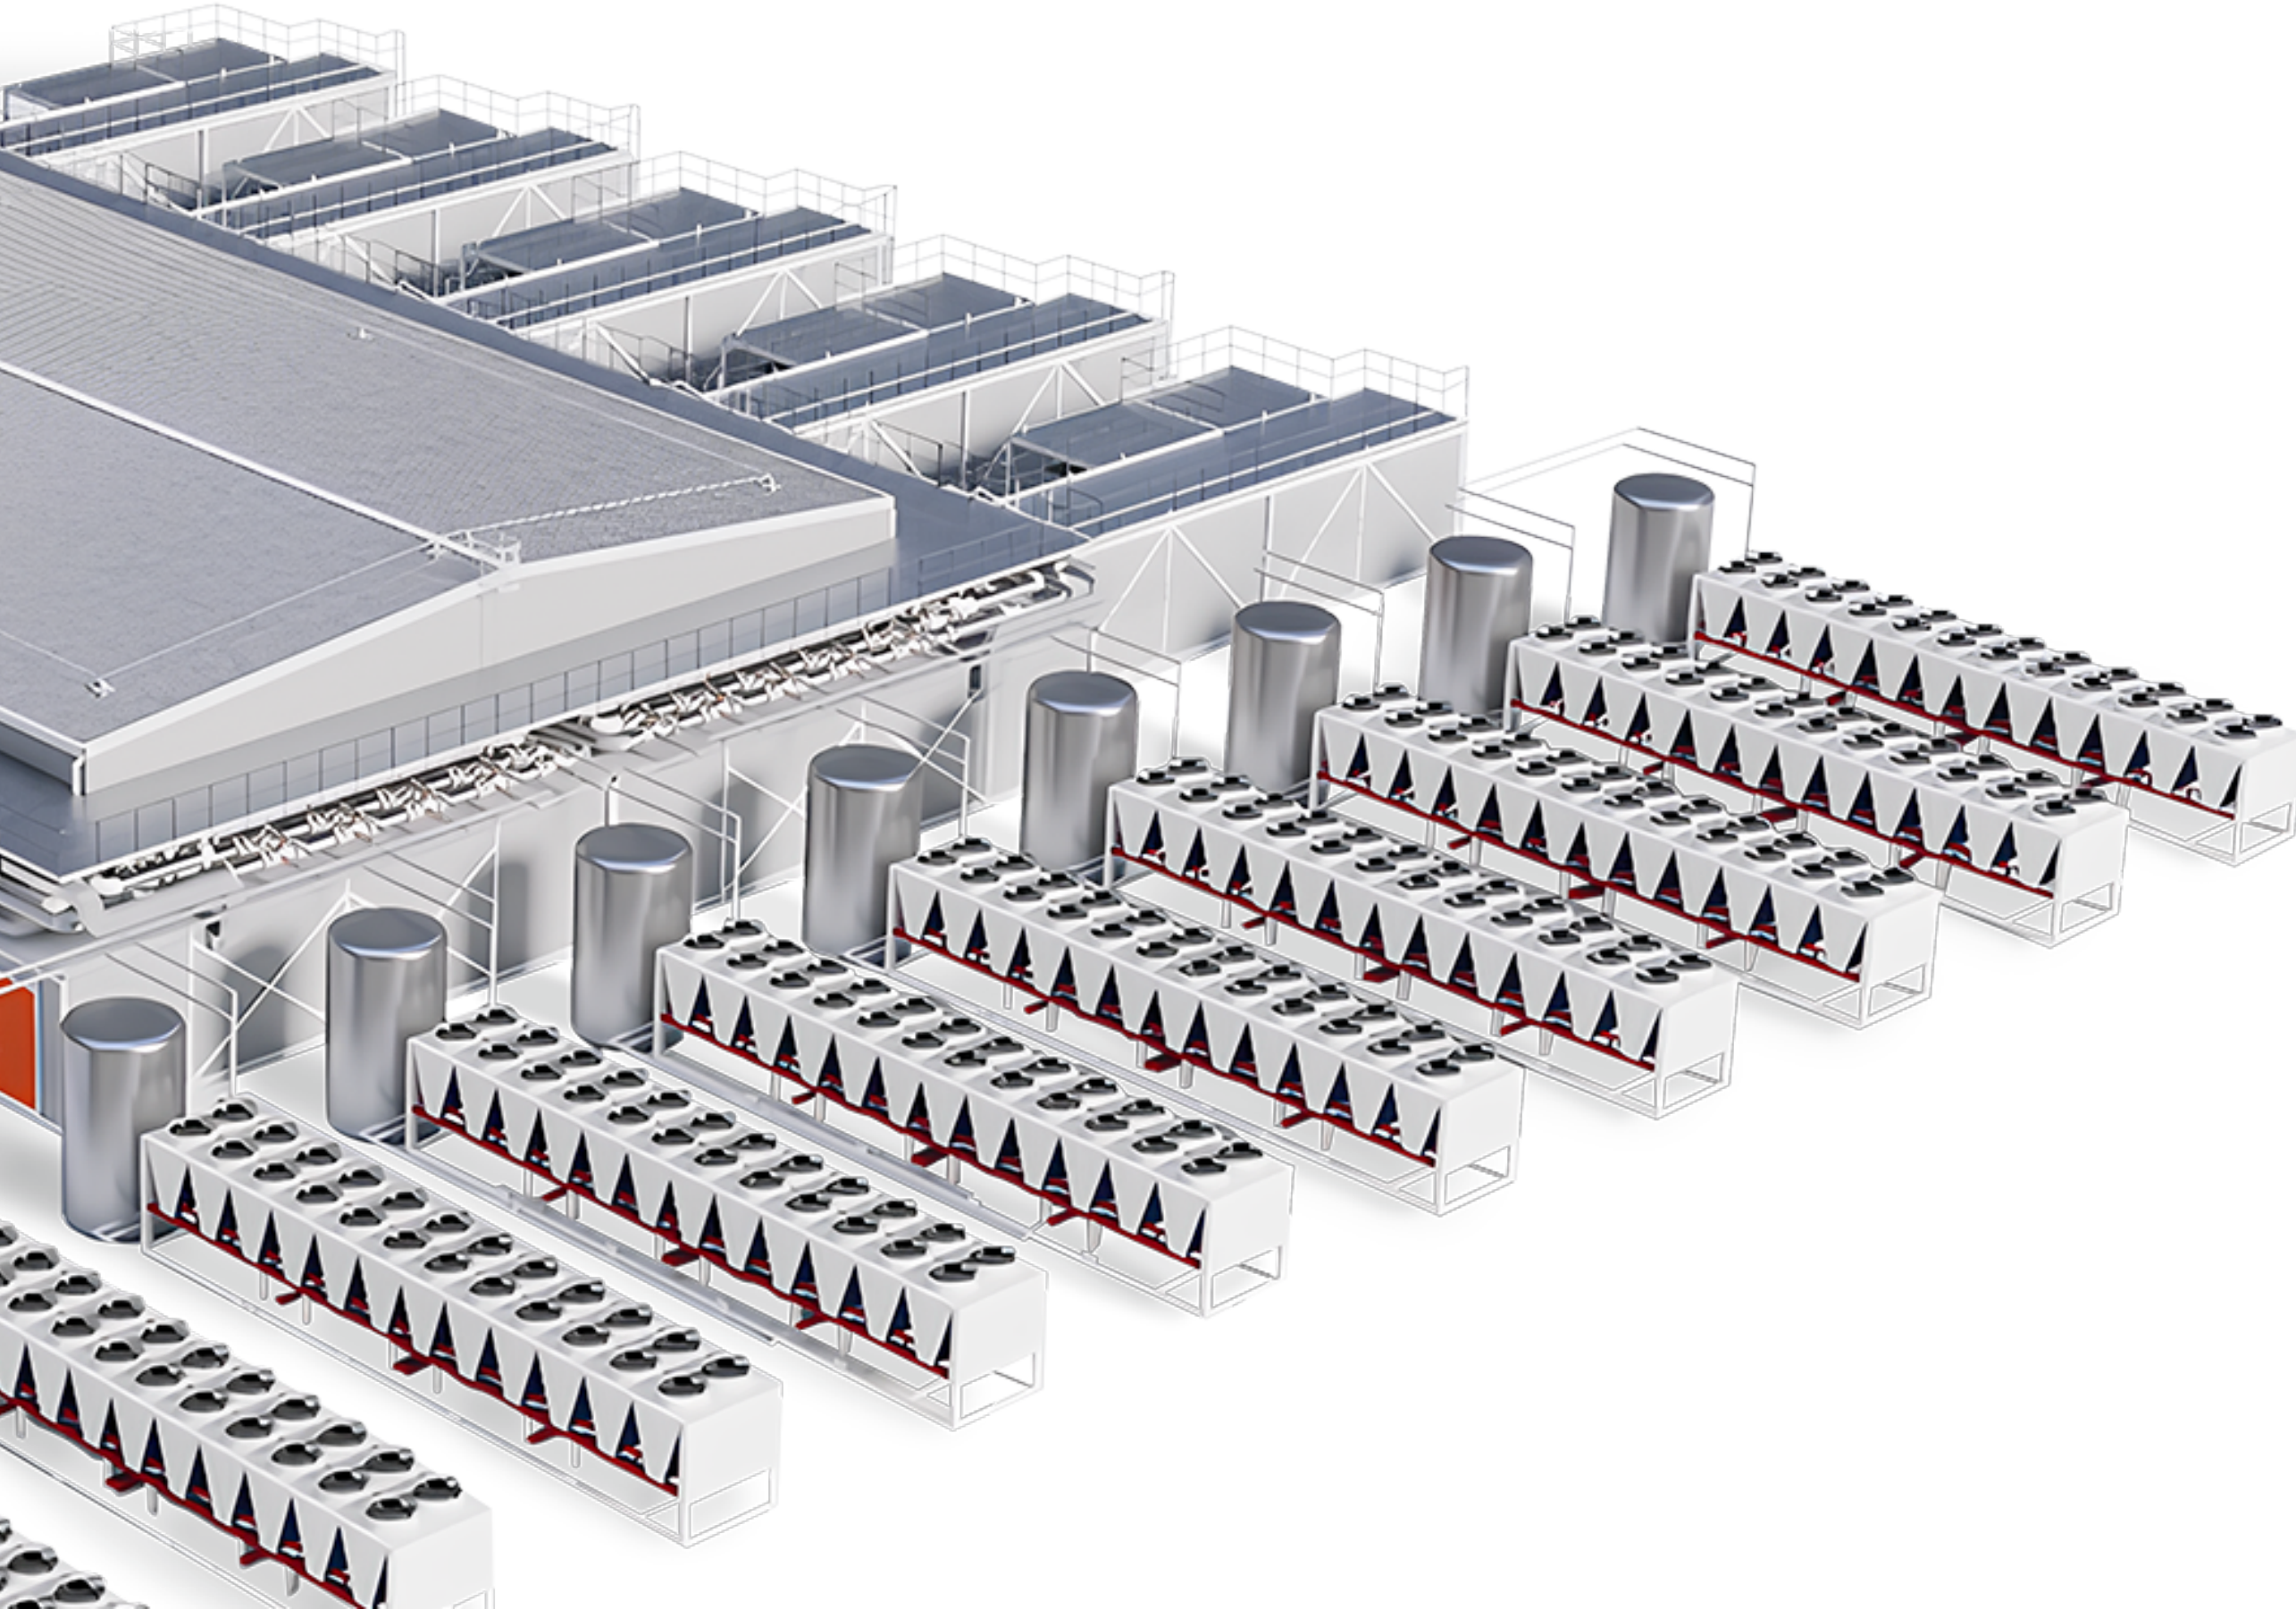

Foundational models refined through continual pre-training on private knowledge — creating exclusive Enterprise LLMs owned entirely by each client.

 Domyn | Compute

The power behind Sovereign AI

Dedicated infrastructure for mission-critical AI workloads — starting with Colosseum, Europe's largest AI supercomputer, powered by NVIDIA Blackwell GPUs.

Colosseum, one of the world's largest AI supercomputers for the trillion-parameter LLM era

Built with the latest NVIDIA Blackwell GPUs to power the training of trillion-parameter language models and mission-critical AI workloads in secure, private environments, Colosseum enables organizations to create sovereign, enterprise-grade AI cloud environments, combining the flexibility of cloud architectures with the security and control of private infrastructure.

Over 115 exaflops of computational power

Private partitions for each single customer

Isolated infrastructure for enterprise workloads

Designed to train models with over 1T parameters

Private infrastructure for mission-critical operations

Domyn Language Models

Purpose-built for mission-critical applications, they're delivered under an open enterprise license that grants clients full ownership and sovereign control over their AI assets.

Domyn | Small Coming Soon

Lightweight Intelligence for Enterprise Use Cases

-  10B-parameter LLM optimized for regulated environments.
-  Supports 50+ languages and 32k token context window.
-  Offers on/off thinking modes.
-  Customizable through CPT, with fully open weights.

Domyn | Large

High Cognitive Power for Mission-Critical Challenges

-  260B-parameter LLM built for sovereign, mission-critical AI.
-  Supports 50+ languages and 128 token context window.
-  Offers on/off thinking modes.
-  Fully ownable under open enterprise licenses.

Domyn Platform

This is the platform where you can create and orchestrate AI agents—and control the entire ecosystem from your own private environment.

Build [custom agents](#) or deploy ours, pre-trained for your domain.

Power your agents with our proprietary models or [any LLM](#) already running in your infrastructure.

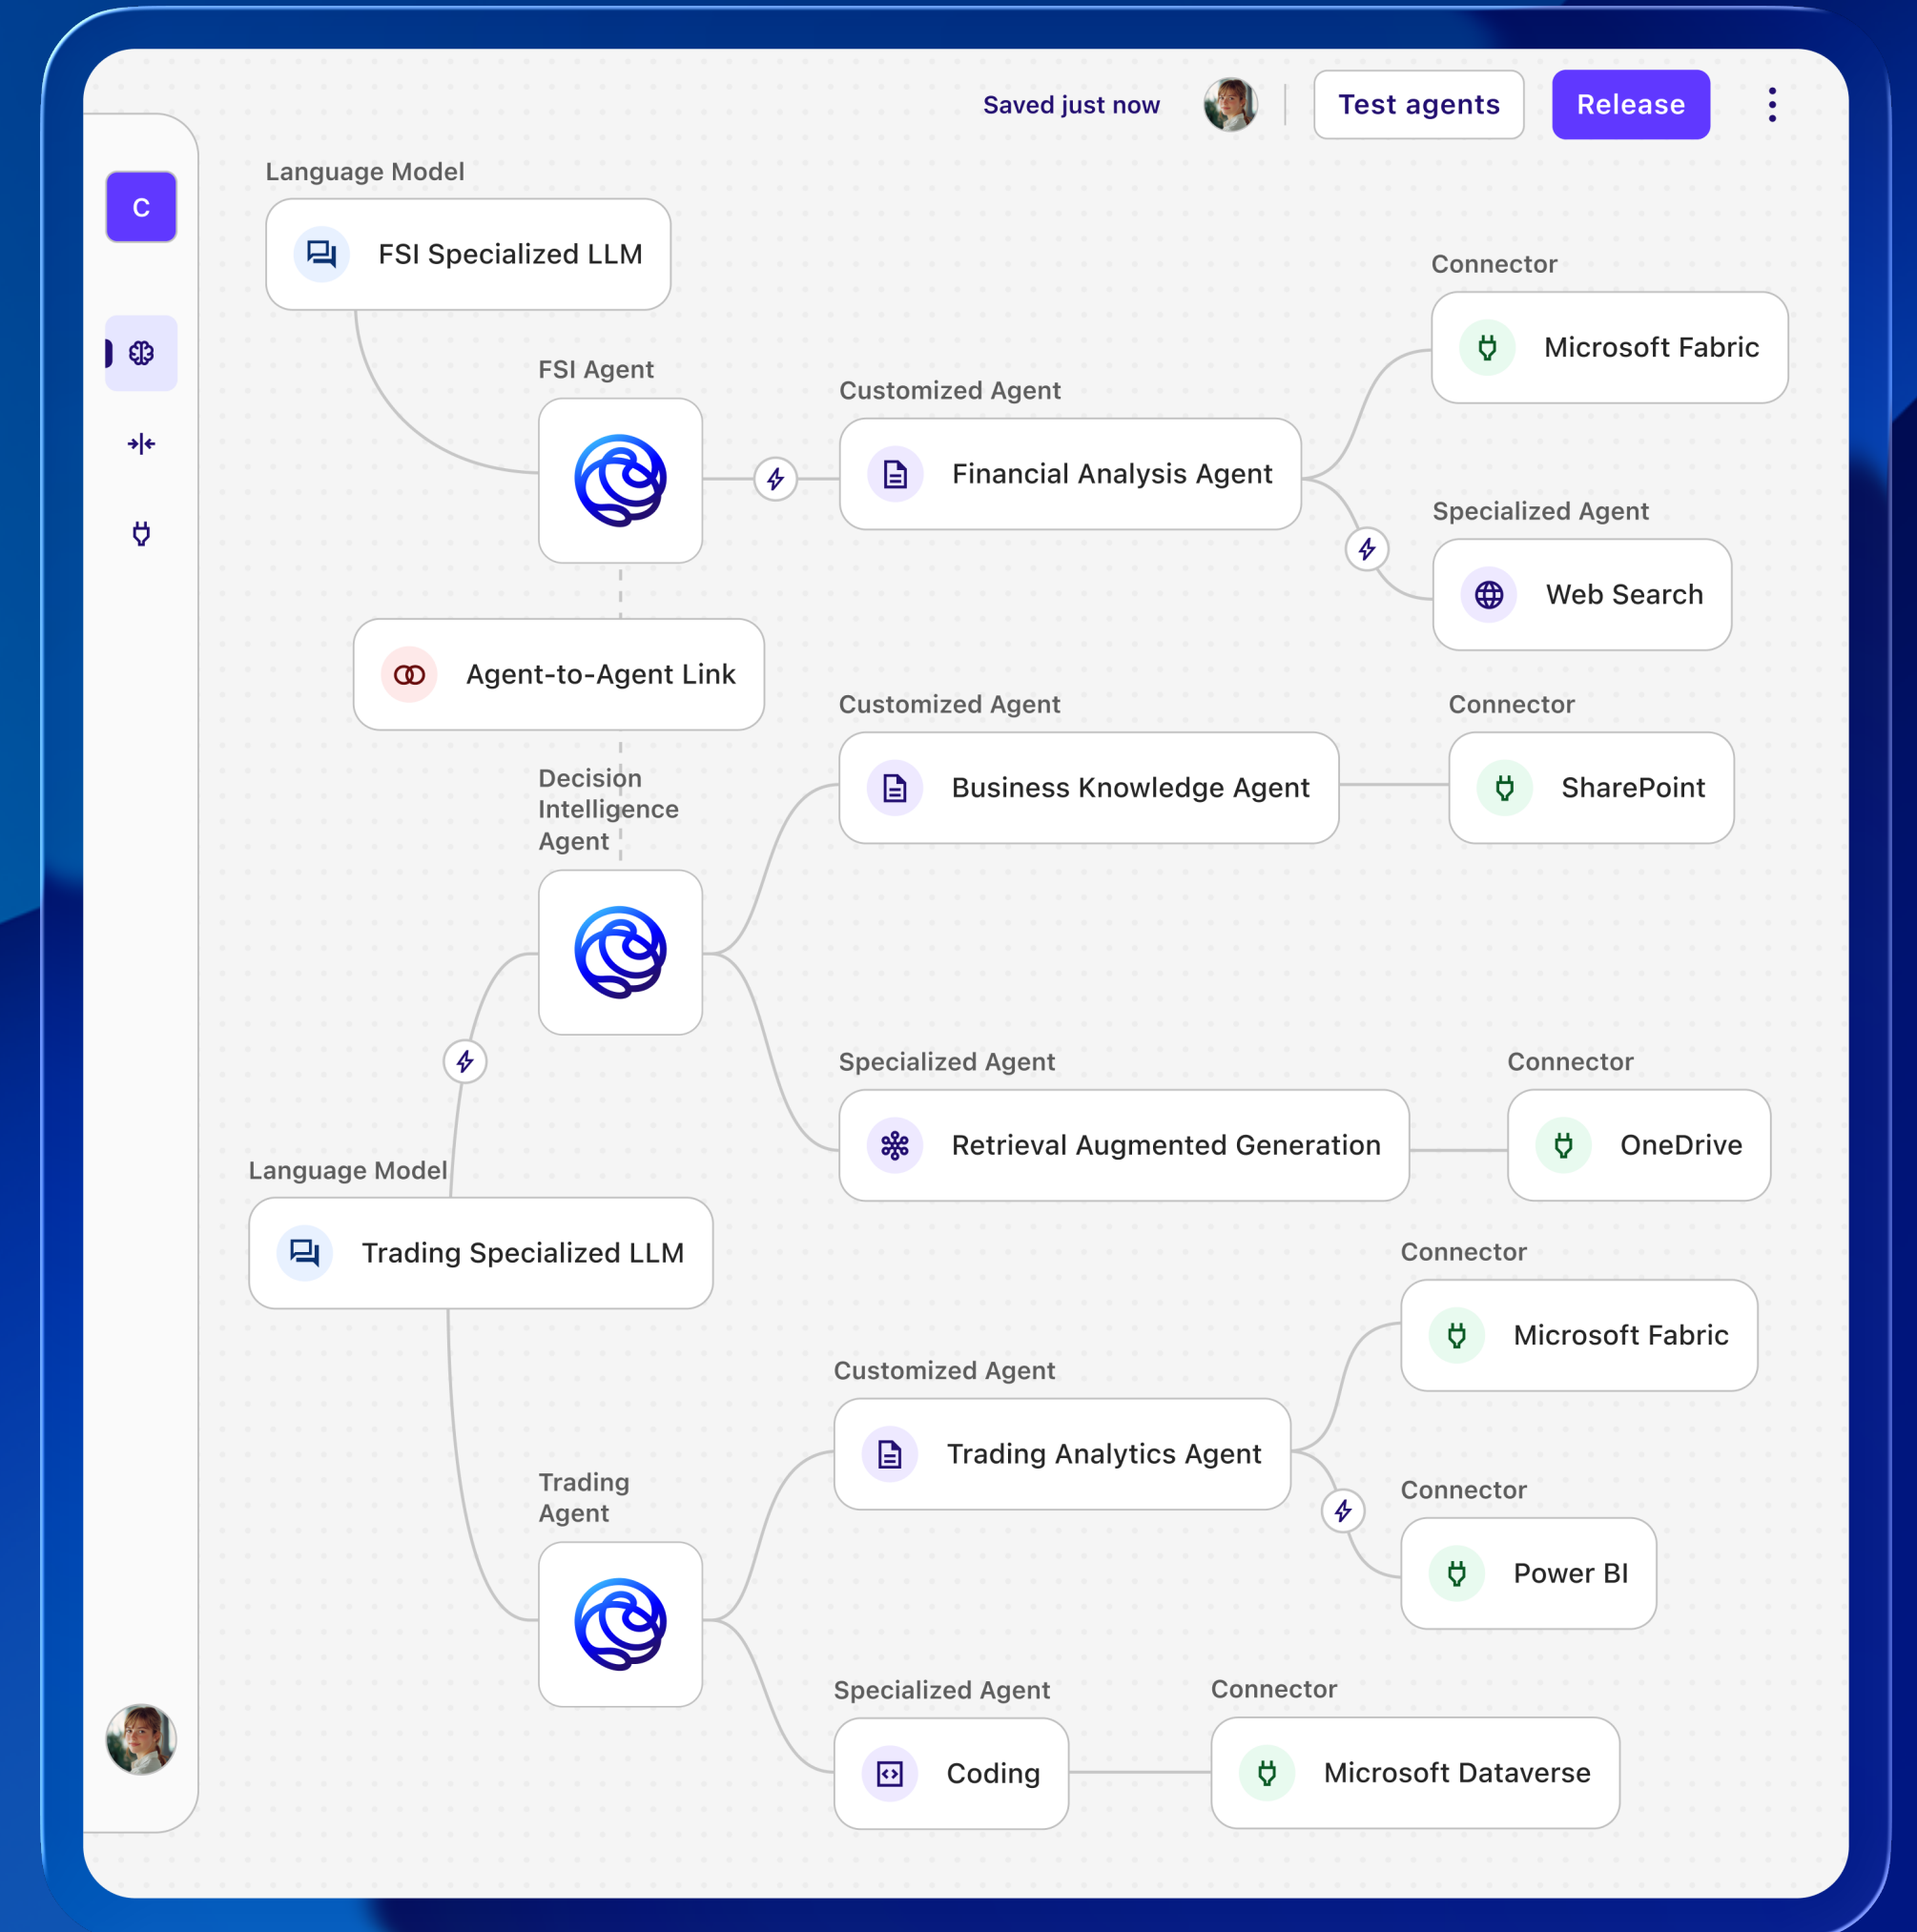

Connect your agents to every data source across your company—[without any limits](#).

Manage your entire AI stack through a [no-code interface](#) or a [dedicated SDK](#).

Protect your data and IP — control your AI ecosystem, [grow it](#) on your terms.

Domyn Agents

A **Domyn Agent** is a software ecosystem of agentic AI designed to transform advanced language models into intelligent, collaborative systems fully integrated into mission-critical enterprise processes.

Pre-built or fully **bespoke** agents, tailored to each company's unique needs.

Enterprise-grade components included: auditing, permissions, human-in-the-loop.

Universal access to **structured** and **unstructured** data sources, without limits.

Equipped with core **sub-agents** for web search, code generation, and RAG.

Seamlessly connects with existing agentic ecosystems and **enterprise legacy systems**.

One of our regional credit teams has been approving an unusually high volume of exceptions this month. Can you investigate if there's a systemic issue?

Sources Checked ▾

I've analyzed exception approval logs across all regional branches for the past 30 days and cross-referenced them with internal policy thresholds and analyst-level historical behavior. The Southern Italy branch shows a 68% spike in exception approvals, with three analysts consistently overriding credit score requirements. Based on internal procedures, I recommend temporarily lowering exception approval limits for those analysts and flagging the cases for supervisory review.

Would you like me to proceed?

Incident Summary.pdf
45MB

Yes please, proceed.

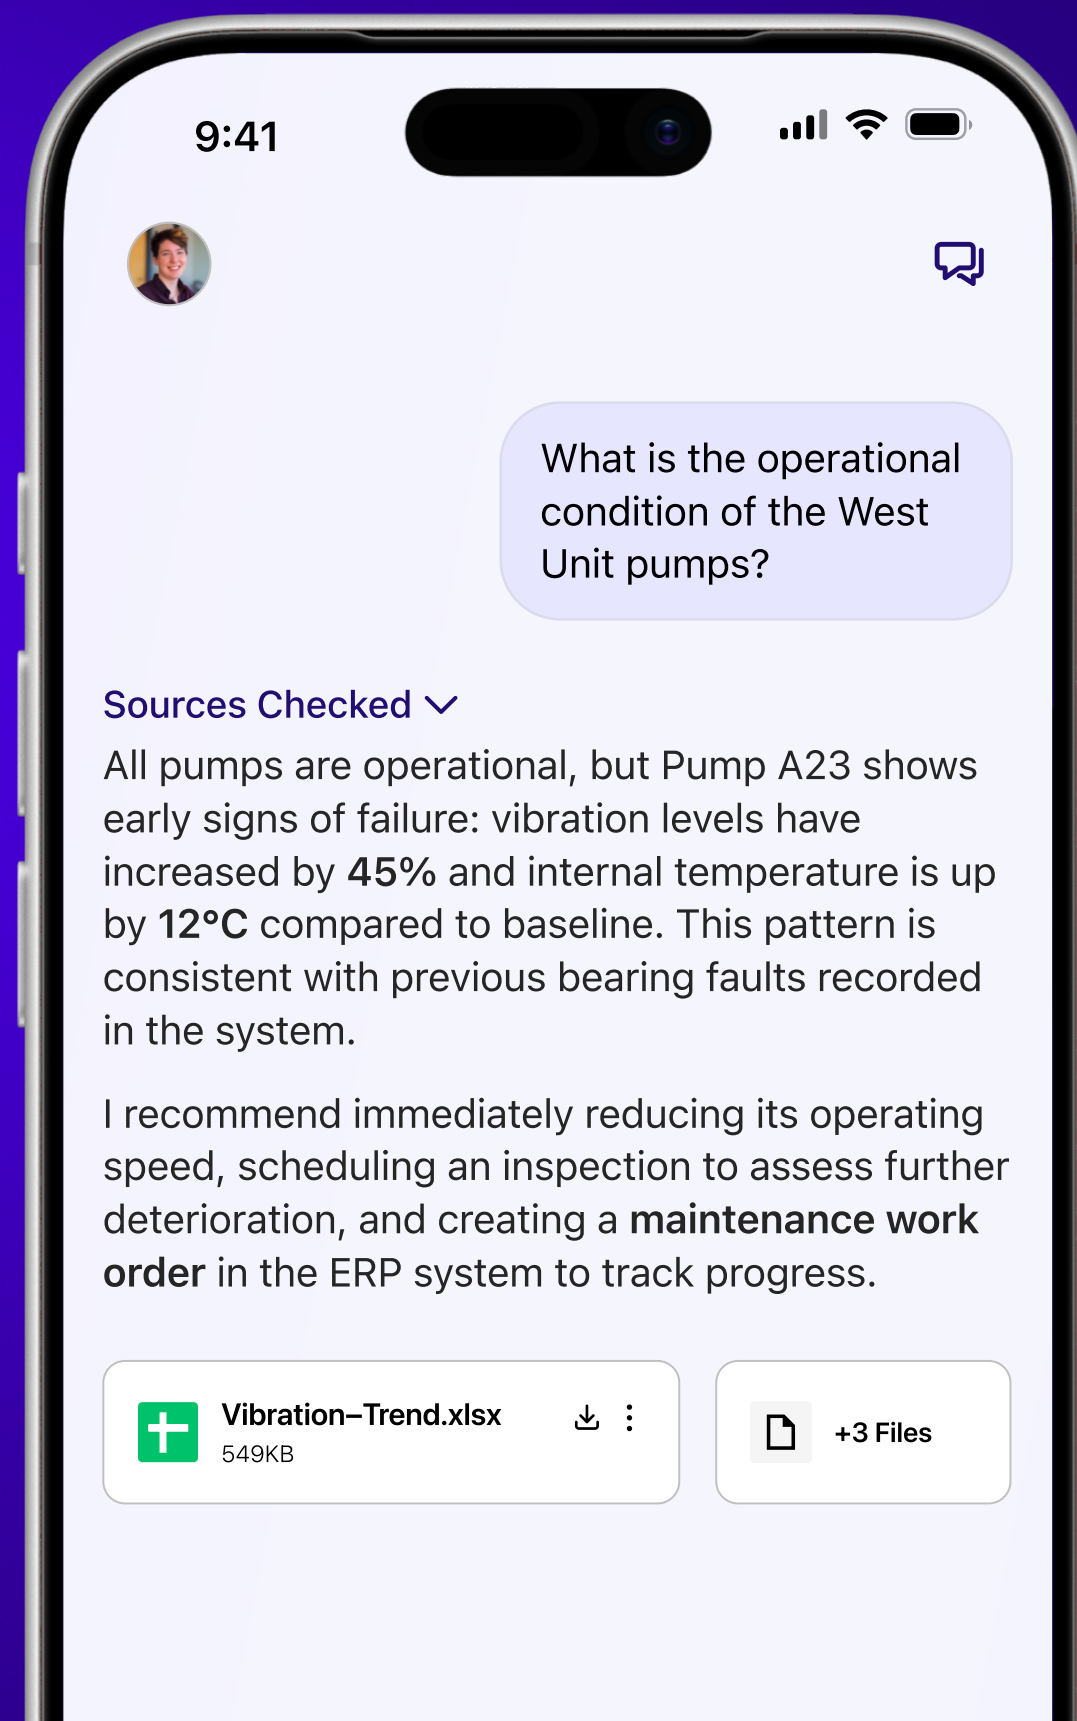

Perfect, exception limits for the three analysts have been adjusted, and their cases flagged for supervisory review. Compliance has been notified—audit starts within 24 hours. I'll report back in 48 with any further findings. Let me know if I can support you further.

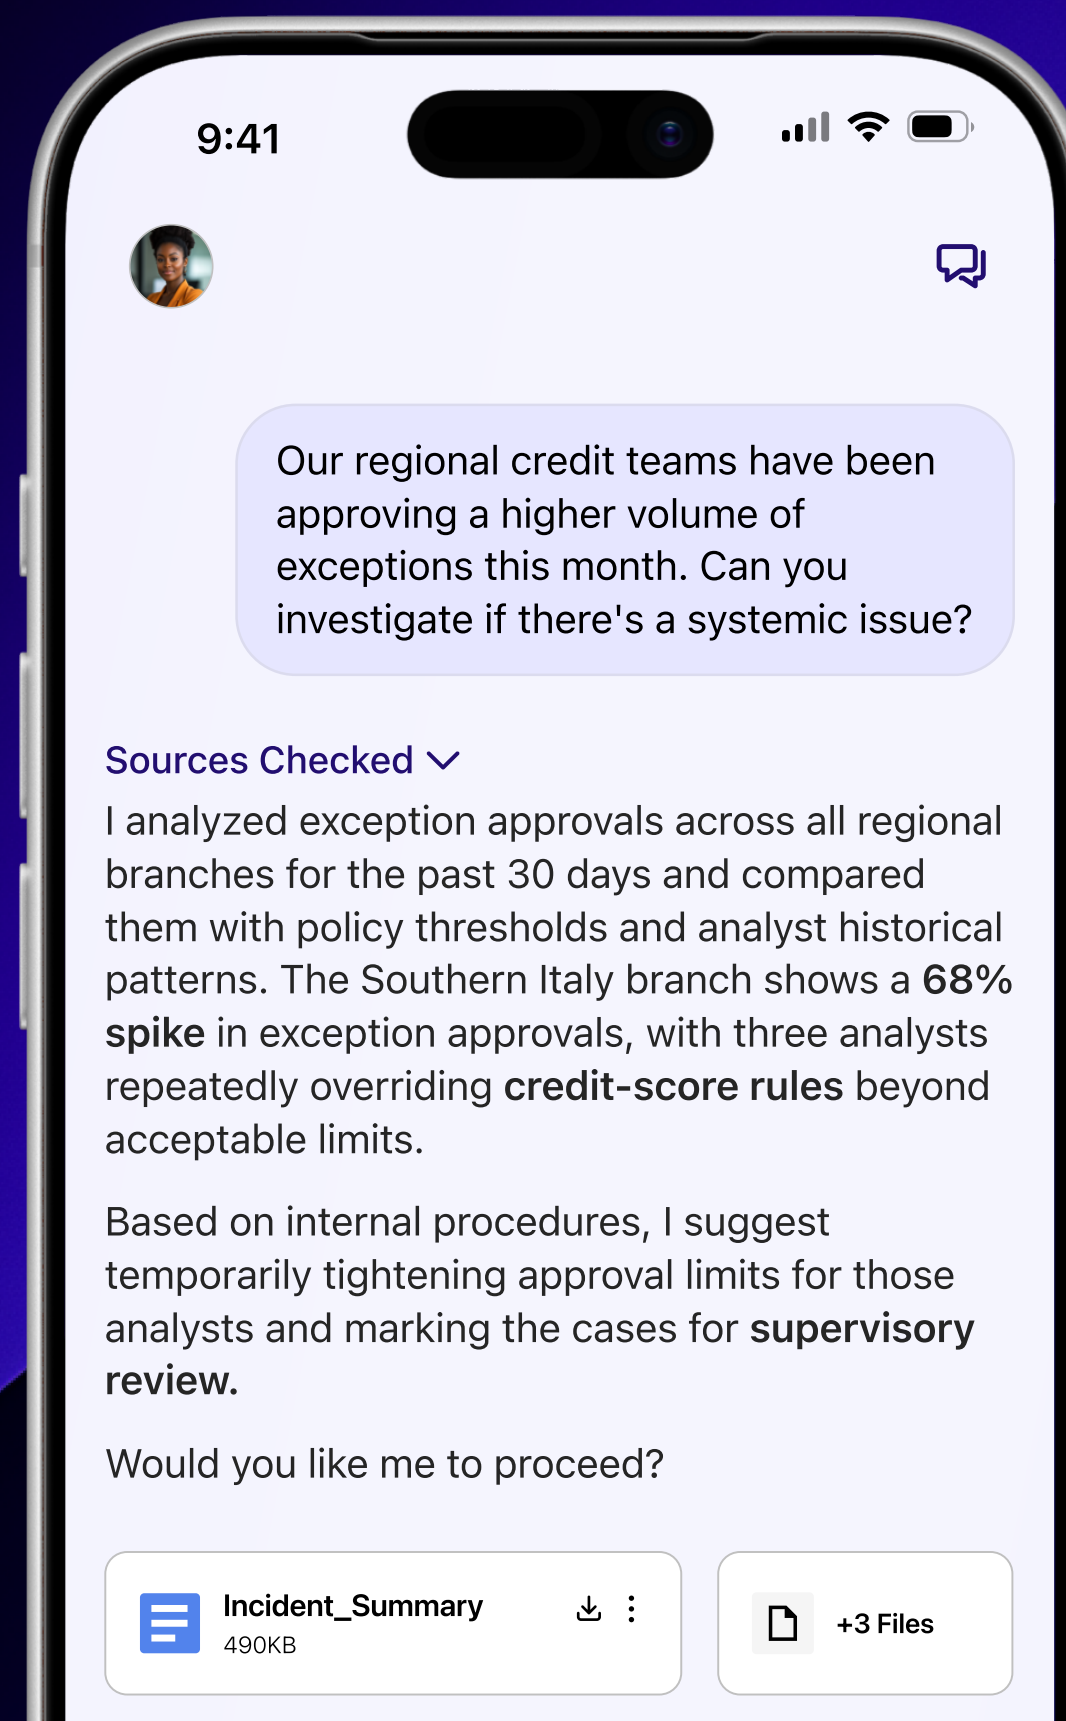

Specialized AI Agents for Regulated Industries

Domyn offers bespoke agents tailored to enterprise needs, as well as pre-built specialized ones suited for a wide range of highly regulated sectors.

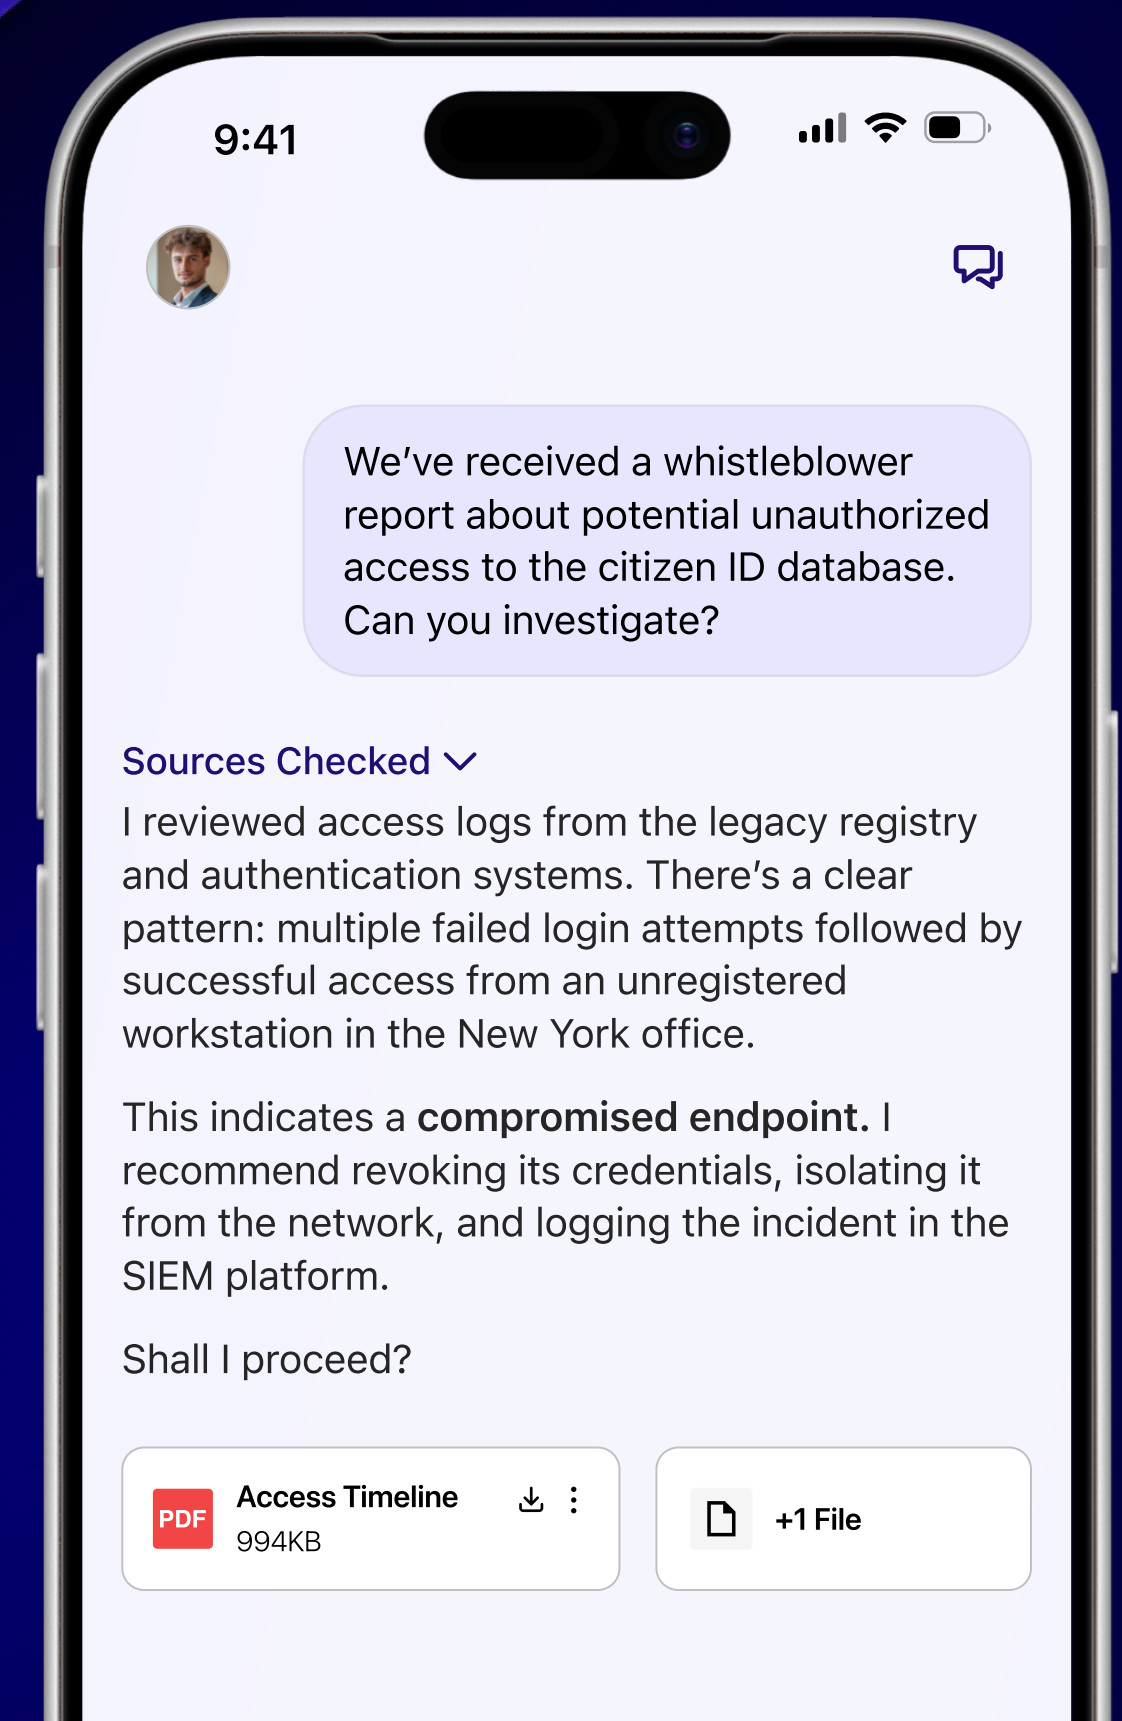

Advanced Manufacturing

Financial Services

Government
