Full-Stack JavaScript Developer

About intertempi

The company

At intertempi GmbH, we work to revolutionize the future of workspaces with Smart Tech Solutions. Our proprietary SaaS platform is a single touchpoint for IoT and provider integration, offering flexible office management to property owners, asset managers, as well as tenants. With intertempi our users can achieve a flexible and tech-enabled usage of underutilized commercial / office space to increase its profitability and tenant satisfaction. We are at the forefront of smart office development, sensors, and IoT.

Product vision

We integrate multiple smart building / smart office services for real-estate players such as digital access, utilization monitoring, flexible office furnishing, facility management etc. into a single easy to use system. We believe tech-enabled automation can create a smart, well serviced and easy to manage workspace that meets the increased needs of users at minimal impact to real estate providers. The future of work starts now.

Team

We are currently a small team with diverse backgrounds based in Berlin. We value transparency and initiative in a fast and fun environment. Everyone on our team comes with their own unique approach and we place great value on the input of our whole team.

Why you should join our team

As part of our core team you can learn hands-on startup building and development in early stage. Given our small agile size there is plenty of opportunity for everyone to thrive and develop own strengths. We have a great office in our own coworking space which we run as a showroom for partners, customers and investors. We value co-located working which will ensure that everyone gets the level of guidance and support that they need. Most importantly we have a non hierarchical office structure where we encourage everyone to have a voice and contribute and most importantly give feedback so every team member can shape our work environment and define who we are.

Technical requirements

General:
- Frontend / Backend Development
- JavaScript ES6+ / Node.js
- React / Express
