Hello from Pilsen to Krosnice. Thanks for your temperature measurement

First, we noticed that in both places, the temperature went down between November 25th and December 2nd. In Krosnica (Poland), it dropped from about 8.5°C to 5°C . Why? Since it's the transition from autumn to winter, the days are getting shorter, the sun is lower in the sky, and it makes sense that both cities are cooling down! Krosnica is much warmer than Pilsen.

Why are they so different?

Weather moves around a lot. Krosnica might have been getting warmer air blown in from the south or the sea during those days. Winter is definitely coming, but Pilsen got the freezing weather much faster than Krosnica!
