

LETTER OF RECOMMENDATION

Community Health Association was established in 2014 and strives to continuously promote innovative cancer education, support and research that speaks to the needs of young people. Focusing and targeting our programs and campaigns on community health delivery systems and health information systems, its representatives continuously promote innovative cancer education, support and research that reflects the experience, feedback and priorities of all stakeholders. We aim to change people perception in regards to cancer-reducing stigma, reducing time involved in accessing basic services, and combating lack of general knowledge, access to pertinent resources and accurate data.

We have always promoted patients' and carers' literacy in cancer field, therefore we consider that Trustedoctor.com will become an vital and mandatory tool for receiving a certified, accessible opinion on their complex treatment options.
