

PowerAuth 2.0 Mobile Token

Top Security For All Your Applications

Make access to all your digital channels easier for your customers with a highly secure and user-friendly means of authentication and authorizing operations. Mobile Token from Lime is a simple mobile app for iPhone and Android. Thanks to the app, you will never have to use SMS authorization or distribute hardware tokens.

The solution is also open-source, which means you can integrate it with your internet banking, banking API (PSD2), or trading system quickly and cost-effectively, without worrying about slow support or unclear licensing terms, or fear of vendor lock-in.

Great User Experience

Top experts in user experience worked with top security experts to produce our mobile token. Thanks to its smart online mode, mobile push notifications, and a beautiful visual design, our application is more enjoyable and faster than competitive solutions.

Key Features

- **Simple PIN or fingerprint scan**
Your clients can sign in with an easy-to-remember numeric password (PIN) or a fingerprint.
- **Flexible activation, available self service**
The mobile token can be easily activated and managed through various channels, such as internet banking or an ATM.
- **Support for push notifications**
Your users will be alerted by a push message at just the right moment so they do not have to search for the app.
- **One token for all applications**
Your clients do not have to install a specific mobile app for each digital channel. They can use just one.
- **Document signatures**
Signing a contract amendment with a private key signature has never been easier. Just enter the PIN and it's done!
- **Context-based security**
Your clients can secure their Mobile Token even more using wearable devices commonly available today.

Solution Architecture

About Lime

We are confident that financial services can be made simpler and more accessible to ordinary people thanks to modern technology. This is why we create mobile security products and products for online digital banking services. Our services are already trusted by some of the most dynamic banks and emerging fintech companies.
