PowerAuth 2.0 Web Flow

Authentication And Authorization In One Place

Your bank is growing and mobile and web apps are starting to accumulate. How do you deal with user authentication and payment authorization in these cluttered systems? Let's move authentication and authorization into one place with PowerAuth 2.0 Web Flow! Not only will you simplify the technical side of your systems, you will fundamentally increase their security and user friendliness. As an extra bonus, you will gain a solution helping you to comply with the security requirements of PSD2 legislation.

Since the solution is open-source, it is very easy to integrate with open standards and platforms. As a result, your internet banking, mobile banking, or banking API security can be solved quickly, cheaply, and with minimum effort.

Two-Factor Authentication

PowerAuth 2.0 Web Flow is fully compatible with PowerAuth 2.0 Mobile Token, so you can confirm operations quickly and conveniently with a simple mobile app. Verification is done using strong, two-factor authentication (2FA). Of course, the solution remains flexible and you can extend it with alternative authentication and authorization methods such as SMS or hardware token support.

Key Features

- **Unified authentication and authorization**
  Your systems will be less cluttered and users will place greater trust in them when signing in.

- **Support for PA2.0 Mobile Token**
  Users can log in and confirm operations using a simple mobile app for iOS and Android.

- **Great user experience**
  The solution has a stunning user interface and since it is fast and convenient, will be popular with your users.

- **Open-source, ready for extensions**
  Alternative authentication methods can be easily added to the solution, including support for new technology standards.

- **Simple integration**
  PowerAuth 2.0 Web Flow can be easily integrated with your applications – web or mobile – via the OAuth 2.0 protocol.

- **PSD2 ready**
  The solution is designed to help you provide compliance with PSD2 legislation.

Solution Architecture
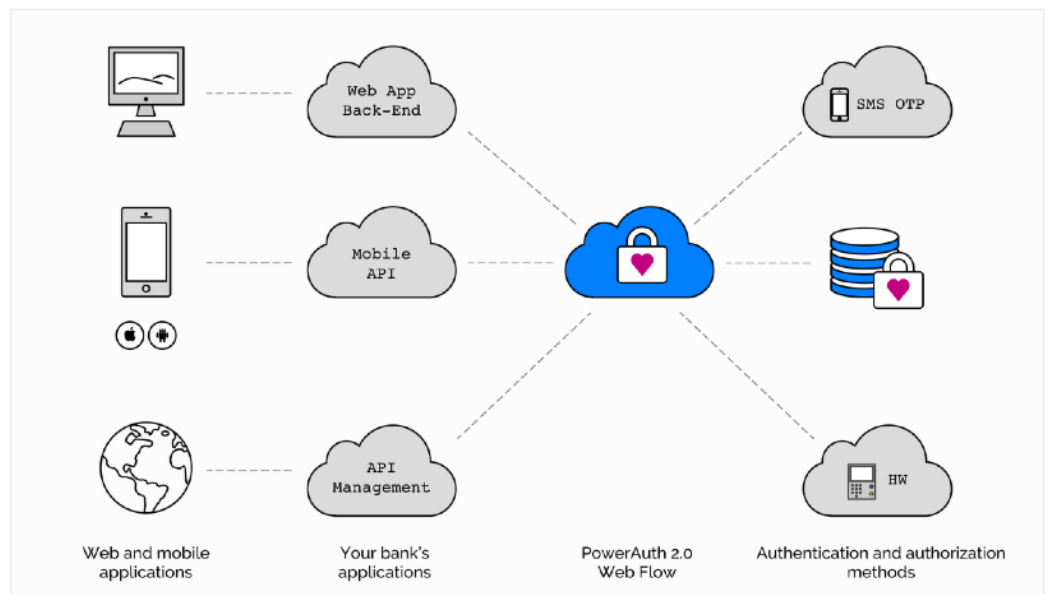

About Lime

We are confident that financial services can be made simpler and more accessible to ordinary people thanks to modern technology. This is why we create mobile security products and products for online digital banking services. Our services are already trusted by some of the most dynamic banks and emerging fintech companies.
