

Mechanical Engineering

VIRO Group

The VIRO Group is a family-run engineering firm with 13 branches, supporting clients in the development and implementation of bespoke technical solutions. Our core competencies lie in product development, mechanical engineering and the realisation of complex industrial projects, including engineering, project management and turnkey system integration.

With many years of experience in mechanical engineering, we support companies through every stage of plant and machinery design. Our experts guide you from the initial concept through to final implementation, ensuring that machinery and plant are optimally designed, reliably constructed and engineered to be future-proof.

Our services

- Analysis of technical and economic feasibility
- Development of technical solutions and concepts
- Evaluation and design of functions, components, machines and technical systems
- Creation of 3D models and technical drawings in all standard CAD systems
- Holistic consideration of interdisciplinary interfaces

Your benefits

- Relief for internal resources through rapid, objective analysis and external engineering expertise
- Creation of clear solution approaches and a framework for further development and design
- Provision of precise design data for coordination with production and manufacturing
- Reduction in subsequent adjustments and development effort
- Increased planning reliability and efficiency in the development process

The added value of VIRO
