

Turnkey solutions

VIRO Group

The VIRO Group is a family-run engineering firm with 13 branches, supporting clients in the development and implementation of bespoke technical solutions. Our core competencies lie in product development, mechanical engineering and the realisation of complex industrial projects, including engineering, project management and turnkey system integration.

In our own assembly hall, which covers around 600 m², we assemble and test complete systems, including FAT/SAT, prior to delivery. In this way, VIRO complements its engineering expertise with direct implementation right through to the finished system, all with a single point of contact throughout every phase of the project. This is a key advantage for many customers.

Our services

- Specification (requirements) & functional specification
- System architecture
- Concept development & proof of concept
- Basic & detailed engineering
- Electrical & automation technology
- Procurement, assembly & system integration
- FAT/SAT, commissioning & documentation
- Service, maintenance & training

Your benefits

- Turnkey solutions from a single source
- Reduction in the effort required for interfaces and coordination
- Faster project implementation
- High level of planning and cost certainty
- Relief for internal resources
- Verified quality thanks to early testing
- Solutions that comply with standards and are ready for operation
- Lower risk during implementation and commissioning

We are your partner for individual machine engineering and automation solutions.

The added value of VIRO
