Greetings and welcome to the latest edition of the Silvair newsletter!

We're thrilled to announce **Silvair's solution plans**, including the **gateway based ELT service**, **Silvair Firmware 2.30 NLC**, and the opportunity to meet us at **Light + Building 2024**.

## Exciting Plans for Silvair Solutions in 2024!

We're kicking off 2024 with ambitious product plans! We will keep working on various aspects of emergency lighting testing, with the ultimate goal of delivering a fully automatic gateway-based service. To enable wider availability of different emergency components, the feature will also become supported by single-chip DALI firmware. Finally, we aim to introduce support for central-battery emergency systems used across the U.S., ensuring compliance with UL 924.

At the same time, we'll be looking into ways of handling large-scale installations more comfortably. Features such as BMS integration open new opportunities for our Partners, and they are certainly on our radar as we analyze various implementation options. Simultaneously, we'll proceed with further Android app development and ongoing system excellence efforts, reflecting our commitment to delivering the best wireless control experience in the industry.

Silvair Firmware 2.30 NLC – **Unleashed!**

## Silvair Firmware 2.30 NLC

Introducing Silvair Firmware 2.30 NLC – our groundbreaking lighting control firmware fully compliant with the Bluetooth NLC standard. As the world's first to achieve Bluetooth NLC qualification for our firmware stack, we're thrilled to offer it to our partners. The latest firmware not only adheres to new specifications but also brings multiple performance enhancements for improved network stability and resilience. Notable improvements include a significantly shortened over-the-air update process (up to 70% faster!), the beta release of the unprovisioned behavior feature, and various other key enhancements. ## Light + Building 2024

We're thrilled to announce our participation in Light + Building 2024 in Frankfurt. Light + Building focuses on lighting trends in all their facets, the electrification and digitalisation of home and building service technology and connected security technology. As Silvair, we can't wait to share our commitment to innovative lighting solutions there.

Save the date: **Mar 3-8 2024, Frankfurt.**

Stay tuned for further updates in our monthly newsletter, and let's continue our journey of innovation and excellence in the lighting industry.
